Department of Electrical and Electronics Engineering

Student Feedback:

Summarizing student feedback and corresponding actions taken to address concerns about the handling of lab equipment in courses such as Electric Circuit Analysis Lab and Power Electronics Lab. Based on the feedback received:

Concerns Raised:

- Students were reported issues related to the working condition of lab equipment.
- Errors were noted during experiments, particularly in labs like Electric Circuit Analysis and Power Electronics.

Actions Taken:

- **Equipment maintenance:** Some equipment was under service during the feedback period.
- **Service and procurement of new equipments:** The equipments used in the electric circuit analysis laboratory were given for the service and in the power electronics laboratory all the old experimental modules were replaced by new modules. Faculty members responsible for these labs were advised to repeat the experiments promptly after the equipment were replaced.

Faculty Feedback:

According to the faculty feedback, the following are the concerns raised and corresponding actions taken. Some of the faculties have raised concerns about some lab equipment needing to be serviced to get accurate results and better delivery of the course content and it is better to include theory and lab in the same semester so that students can understand the concepts better.

Concerns Raised:

Based on the faculty feedback, it appears that there are two main concerns raised and corresponding actions taken are as follows:

1. **Lab Equipment Servicing:** Some faculty members have expressed concerns about the need for servicing certain lab equipment to ensure accurate results and improve the delivery of the course content. This suggests that there may be issues with the functionality or calibration of certain equipment, which could affect the quality of student learning and experimental outcomes.

Actions Taken:

- Schedule maintenance or servicing for the identified lab equipment to address any issues affecting accuracy and reliability.
- Ensure that all lab equipment is properly calibrated and functioning correctly before use in student experiments.
- Provide training or resources for faculty members to troubleshoot equipment issues and perform basic maintenance tasks as needed.

Concerns Raised:

2. **Integration of Theory and Lab:** Some faculty members have suggested that it would be beneficial to include both theory and lab components in the same semester. This approach can help students better understand the concepts by immediately applying them in practical experiments, reinforcing theoretical knowledge with hands-on experience.

Actions Taken:

- Review and revise the curriculum to integrate theory and lab within the same semester where feasible.
- Develop lesson plans and teaching materials that align theory with corresponding lab activities to facilitate a cohesive learning experience.
- Provide guidance and support for faculty members to adapt their teaching strategies to incorporate both theoretical and practical aspects effectively.

By addressing these concerns and taking corresponding actions, the department can enhance the quality of education and better meet the needs of students and faculty members alike.

Graduate exit survey Feedback and Employer Feedback:

According to the graduate feedback, the following are the concerns raised and corresponding actions taken. One of the graduates raised concerns that the students could not design/develop a component/process/algorithm as per the specified requirements at their workplace which is a lack of proficiency in the field of computer systems and programming languages and hands on experience. One of the graduates has suggested inculcating the communication skills among the students for the workplace.

The action was taken: The Department has introduced Software related course such as 21EE581 Department Specific AEC T & D using Scilab and 21EE691 Modelling & Simulation of Electric Vehicle system Using MATLAB (Licensed version), In the curriculum we have introduced an ability enhancement course such as professional skills for the workplace (22PSW47) which include communication skills, presentation skills and English language etc

Concerns Raised:

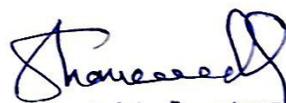

Some of the employers raised concerns about the proficiency to handle real-time issues, the technology of design of products required to the industrial needs, and the capability of handling situations of moral and social responsibilities.

The action was taken: The Department has introduced Software related course such as 21EE581 Department Specific AEC T & D using Scilab and 21EE691 Modelling & Simulation of Electric Vehicle system Using MATLAB (Licensed version) , professional skills for the workplace (22PSW47)

The Department has introduced courses such as interdisciplinary software, hardware mini projects, and internships in EV Technology. It seems like the Department has taken proactive steps to address the concerns raised by graduates and employers regarding the lack of proficiency in computer systems and programming languages, as well as the ability to handle real-time issues and industrial needs. Here's a summary of the actions taken:

1. **Introduction of Courses:** The Department has introduced mandatory courses focusing on programming languages such as C, C++, Python and JAVA. This initiative aims to improve students' proficiency in computer systems and programming, which should help them better meet the requirements of their workplaces.
2. **Introduction of Courses in Electric Vehicle (EV) Technology:** Recognizing the importance of emerging technologies like Electric Vehicles in the industry, the Department has introduced courses specifically focusing on EV technology as an industrial training. This includes interdisciplinary software and hardware mini projects, along with internships in EV technology, to provide students with practical experience and knowledge in this field. And In the curriculum we have introduced an ability enhancement course such as professional skills for the workplace (22PSW47) which include communication skills, presentation skills and English language etc.

These actions demonstrate the Department's commitment to addressing the feedback provided by graduates and employers, aiming to better equip students with the necessary skills and knowledge to excel in their careers and meet the demands of the industry.

Brief Report on the Activity

3D printing allows for rapid prototyping and onsite manufacturing of products, initially done with plastic. Presently the 3D printing uses new techniques with new materials, such as aluminum, bronze, and glass etc. Biomaterials are also being incorporated in specific applications such as printing of ear cartilage, liver tissue etc. As the 3D printing industry is expanding rapidly, this is going to become a big part of many engineering fields

Objectives of FDP

1. The Additive Manufacturing (3D) Laboratory available in the department of Mechanical Engineering, BITM, Ballari, is providing the students with an active learning environment in the trending field of engineering.
2. The laboratory facilitates to fabricate three dimensional (3D) models directly from the computer aided design (CAD) data.
3. The students will be using the laboratory to develop complex CAD models and fabricate prototypes using metal/polymers applied in the engineering and industry.

Topics Covered

1. Introduction to 3D Printing Technology
2. Introduction to Design Software (CAD, Solid Works etc.)
3. Creating 3D Model using Design Software
4. Introduction to Prusa Software
5. Introduction to Ultimaker Cura Software
6. Preparation of 3D Model in Prusa Software
